

Superior Energy Services: Well Performance Testing & Evaluation

Superior's Well Performance Testing and Evaluation division provides a complete service and solutions package of downhole acquired well data. With a complete line of electronic memory and mechanical instrumentation that includes pressure/temperature gauges, production logging tools and calipers, these services are combined with our engineering services to adhere to the objectives requested by the customer. Superior continually examines the latest trends in downhole technology for application in meeting the well test objectives outlined

by the customer. This group possesses an extensive collection of mechanical, electronic and quartz pressure gauges to meet our customer's specific BHP objectives and are supported by a group of highly skilled and experienced technicians and engineers.

At Superior:

- We are dedicated to continuous quality improvement.
- We have one of the most aggressive tool maintenance programs in the industry .
- We incorporate pre-job design and post-job interpretation, with our data acquisition services, to ensure that we meet all of the customer's objectives.
- We demonstrate our commitment to quality by providing employees and customers with one of the most extensive training programs available.
- We eliminate operation problems by offering a complete package of services.
- Our engineering group can aid in the design, implementation and evaluation of all test data.
- We are dedicated to providing our customers with custom designed, cost effective solutions.
